ABOUT THE CASTER CENTER:
Housed within the Institute for Nonprofit Education and Research at the School of Leadership and Education Sciences at the University of San Diego, the Caster Family Center for Nonprofit and Philanthropic Research studies issues of strategic importance to the nonprofit sector, with the goal of identifying and advancing best practices in nonprofit research and evaluation metrics. The Caster Center offers resources and products that are grounded in systematic research and have direct applicability to the field. We work in collaboration, and under contract, with nonprofits and philanthropic organizations on a wide range of projects, including needs assessment, program evaluation, theory of change or logic model development, grantmaking impact reports, and board development. We regularly analyze funding, public policy, and environmental trends affecting the nonprofit sector, and publish data about public charities and foundations in California. The Caster Center also serves as an important training facility that enables doctoral students to engage in a variety of nonprofit sector research projects.

EXECUTIVE SUMMARY
The 2016 State of Nonprofits and Philanthropy annual report analyzes the health of San Diego’s nonprofit sector, identifies important trends, and reports on leadership perspectives.

The number of nonprofit organizations is rebounding to pre-recession levels, while revenues and nonprofit employment continue on an upward trend. Nonprofits remain an important contributor to the local economy. Accounting for nine percent of County employment, San Diego’s 10,196 nonprofits generated $14.9B in revenue and held $23.8B in assets. Financial indicators as well as patterns of household giving and volunteering point to a more stable nonprofit sector in San Diego compared to the previous year.

Nonprofit leaders report an increase in demand for their organization’s services and are confronting workforce development issues resulting from changes to the minimum wage and the retirement of many seasoned leaders. These challenges emerge alongside demands from donors for greater efficiency and results-focused reporting, and more collaboration as a means to leveraging limited resources.
