I. INTRODUCTION

In the 1980s, international terrorism was coming of age as it matured with the marriage of state-sponsored terrorism and religious extremism. In the 1990s, it was increasingly clear that modern terrorists were successfully choosing technology to exploit the vulnerabilities of modern societies.1 With citizens providing concentrated targets by tending to live, work, and travel in close proximity, modern societies are particularly susceptible to massive attacks and weapons of mass destruction (WMDs).2 This fact was not lost on perpetrators of terrorism as witnessed by its growing

1. For example, on August 7, 1998, the U.S. Embassies in Kenya and Tanzania were bombed. At least 252 people died (including twelve U.S. citizens), and more than 5,000 were injured. The attacks on the U.S. embassies in East Africa were carried out on U.S. embassies located in the central business district in both cities. Most of the deaths were collateral damage—pedestrians on the street and passengers in public and private vehicles out on the street. In 2001, in a coordinated operation whose breadth and audacity stunned the world, terrorists believed to be part of the Al Qaeda network carried out the worst terrorist attack in modern times, targeting the symbols of U.S. supremacy and leaving about 3,000 people dead. The majority of the victims were in the giant Twin Towers complex, which housed numerous offices and thousands of workers.

capabilities and lethality throughout the Cold War era.\textsuperscript{3}

Amidst a background of rising deadliness of terrorists with easy access to a range of low-tech and high-tech weapons, states (notably Israel and the U.S.) began to suggest that terrorist acts might be approached from a conflict management perspective, rather than exclusively from a law enforcement viewpoint.\textsuperscript{4} This stance was premised on the notion that "in order to wage war against terrorism, terrorists must be seen, not as criminals, but as persons jeopardizing national security."\textsuperscript{5} The belief is that only the use of armed force will result in the degree of decisive action that will minimize the likelihood that offenders will go unpunished. Isolating terrorist groups and punishing states supporting terrorism seemed the urgent (though not new) and primary goal of international cooperation aimed at pressuring countries to take measures unilaterally or multilaterally or to deprive terrorist groups of mobility, safe havens, and sources of income.\textsuperscript{6}

With the end of the Cold War, the development of terrorism as a transnational enterprise would soon make it, more than ever, a separate unit of policy concern not simply for states, but the international community.\textsuperscript{7} Though terrorism has always been high on the international

---

7. Ideological and political quagmires laid down fertile ground for a dichotomy of terrorism to come into being. In the 1960s and 1970s, focus on terrorism mainly targeted ideologically-motivated individuals and small groups. The international community increasingly targeted manifestations of individual and small group acts of "terror-violence," sidestepping the politically volatile issue of state/insurgent sponsored and orchestrated "terror-violence." M. Cherif Bassiouni, \textit{A Policy-Oriented Inquiry into the Different Forms and Manifestations of International Terrorism}, in \textit{LEGAL RESPONSES TO INTERNATIONAL TERRORISM: U.S. PROCEDURAL ASPECTS} xv (M. Cherif Bassiouni ed., 1988); W.T. Mallison,
agenda, it was the September 11, 2001 attacks (hereinafter "September 11") that brought the issue of terrorism and the international regime on the use of force into a new, urgent, and sustained debate.

This Article aims to evaluate the international legal perspectives attendant to U.S. counter-terrorism measures and policy and the attendant strictures and implications. Part II commences by grappling with the uneasy relationship that legal and political complexities have foisted on the UN’s ability to address terrorism and the difficult issue of the definition of terrorism. Within the context of this part, the Article also addresses the two dominant counter-terrorism paradigms—law enforcement and conflict management. Part III moves on to evaluate the law enforcement paradigm which treats terrorism as a crime engaging domestic law enforcement. This part offers a discussion of the “extradite or prosecute” mechanism that lies at the heart of multilateral anti-terrorism conventions and a discussion of the bases of international criminal jurisdiction that provide a framework for domestic anti-terrorism statutes. It concludes with an analysis of the practice of apprehension of terrorists in international space, of which the United States has been a leading proponent, and offers a discussion of the complex legalities attendant to this controversial means.

In Part IV, the article tackles the complexities and technicalities of the conflict management paradigm. It commences by examining the international legal uncertainties inherent in treating terrorists as combatants. The analysis moves on to cover the use of both limited lethal military force in the form of targeted assassinations and large scale military force in the form of pre-emptive strikes and retaliation. In a bid to highlight the transformation from the Cold War era to the post Cold War era, this part focuses on U.S. practice and world reaction both pre- and post-Cold War. It concludes with an examination of the post-September 11 scenario and evaluates whether any perceptible changes in law or state practice are taking place following the military campaigns in Afghanistan (Operation Enduring Freedom) and Iraq (Operation Freedom Iraq).

II. THE UNITED NATIONS AND TERRORISM: AN ASYMETRICAL BALANCING ACT

When the U.N. Charter was drafted in 1945, the right of self-defense was the only included exception (reserved to state discretion) to the general prohibition of the use of force. Previously, in addition to self-
defense, customary international law had accepted reprisal, retaliation, and retribution as legitimate responses by states whose interests had been injured. Under the U.N. Charter, unilateral acts of force not characterized as self-defense, regardless of motive, were made illegal. Individual or collective self-defense became the cornerstone relating to use of force.

The volatile Cold War era that ushered in the U.N. era saw to it that any use of external military force by states was almost always pegged on the right of self-defense in response to an attack, rather than in its anticipation. The dangers of a recognition of pre-emptive or anticipatory self-defense were easily understood. In addition, condemnation by the international community was almost always certain whenever any attempts were made to base use of force on any of the earlier acceptable forms of self-help recognized in customary international law.

The U.N. Charter, while seeming to present a neat and tidy regime on the use of force, nonetheless reflects the drafters' singular focus on creating a political system to govern conflicts between states. They did not contemplate the existence of international terrorists nor "fully anticipate the existence, tenacity, and technology of modern day terrorism." The U.N. Charter simply does not directly address the subtler modes in which terrorists began to operate in the post-World War II period.

Against a background of wars-by-proxy in the Cold War era, fuelled by divisive bipolar politics, terrorist violence was undergoing transformation and escalating precipitously. As national liberation movements increasingly

---

8. Reprisal allows a state to commit an act that is otherwise illegal to counter the illegal act of another state. Retaliation is the infliction upon the delinquent state of the same injury that it has caused the victim. Retribution is a criminal law concept, implying vengeance, which is sometimes used loosely in the international law context as a synonym for retaliation. See, e.g., Derek Bowett, *Reprisals Involving Recourse to Armed Force*, 66 Am. J. Int'l L. 1, 3 (1972); Evelyn S. Colbert, *Retaliation in International Law* 47 (1948).

10. Professor Jordan Paust identifies this danger succinctly: [Is the responding coercion still a use of force in self-defense against an armed 'attack'? Is the responding coercion primarily pre-emptive, retaliatory, or for the purpose of imposing sanctions against a violation of international law? And if among the latter, are any of these forms of responsive coercion ever permissible?]

attained their goal of self-determination, terrorism motivated by religious and ideological motivations took center stage and frequently led to acts of violence with higher levels of fatalities than the relatively more targeted incidents of violence perpetrated by many secular liberation movements.\textsuperscript{13} The confluence of terrorists and state sponsorship was transforming ordinary groups, with otherwise limited capabilities, into more powerful and menacing opponents—converting them from weak and financially impoverished groups into formidable, well-endowed terrorist organizations with an ability to attract recruits and sustain their struggle.\textsuperscript{14}

A. The "Flip-Flop" U.N. Response to the Terrorist Scourge

In response to the massacre of Israeli athletes at the 1972 Munich Olympics, the United Nations called for legal suppression by its members of violent acts of terrorists through ratification of the Convention for the Prevention and Punishment of Certain Acts of International Terrorism.\textsuperscript{15} Many nations, primarily the United States and its allies, voted against this resolution due to its bias toward, and legitimization of, violent national liberation movements.\textsuperscript{16} A primary reason of the U.S. stance, supported by other major Western powers, was the perception that "[t]he Arab and Soviet blocs, along with other allies, tried to shield radical movements, with which they sympathized and supported, from being classified as terrorists—thereby protecting them from international condemnation and punishment."\textsuperscript{17} This distinction between terrorists and revolutionaries was the subject of much disagreement.\textsuperscript{18} It was to loom large over any effort in the volatile Cold War era to establish a definition

\begin{itemize}
\item[13.] See supra text accompanying note 7.
\item[16.] Id.
\item[18.] For example, when Nelson Mandela first visited the U.S., he was on the State Department's list of international terrorists. Mandela is now a Nobel Peace Prize Laureate and pre-eminent international statesman. In the Middle East, another "international terrorist," Yasir Arafat, won the Nobel Peace Prize.
\end{itemize}
of terrorism at the international level.\textsuperscript{19}

In 1974, the United Nations was presented with its greatest opportunity to bring terrorism within the ambit of the U.N. Charter through the key U.N. General Assembly Resolution defining “aggression”—Resolution 3314.\textsuperscript{20} Sidestepping the volatile issue, the United Nations elected to ignore using the word “terrorism,” choosing instead to classify the activities of states who send, organize, or support “armed bands, groups, irregulars or mercenaries, which carry out acts of armed force against another State...”\textsuperscript{21} as unlawful aggression in direct violation of the U.N. Charter.

After another round of ideological and political tussles, in December 1979, real, substantive progress was made by the Sixth Committee (Legal) of the General Assembly, which recommended condemning terrorism \textit{per se}.\textsuperscript{22} Under the draft, “all acts of terrorism that endangered human lives or fundamental freedoms were unequivocally condemned” and an appeal was extended for all nations to become party to international conventions already in existence.\textsuperscript{23} The resolution, in sum and substance, was later adopted by the United Nations.\textsuperscript{24}

The important move by the international community in 1979 however did not mark a practical turning point. Previous ideological and political differences continued to present a major stumbling block to repeated attempts by the United Nations in the 1980s to define the term “terrorism.”\textsuperscript{25} These efforts, like those before, failed mainly due to differences of

\textsuperscript{21} Id. at art 3(g).
\textsuperscript{23} Id.
\textsuperscript{25} In choosing to avoid defining terrorism conclusively, the U.N. has either used it in a more general sense or selected specific acts as constituting terrorist activity. Consequently, the international community has taken a piecemeal approach and addressed the problem of international terrorism by identifying particular criminal acts inherently “terrorist” in nature to be prevented and punished by domestic law. The result has been the adoption of numerous global treaties, regional conventions, and bilateral agreements, which are relevant to the suppression of international terrorism, and corresponding domestic laws that implement those arrangements. \textit{See} Leah M. Campbell, \textit{Defending Against Terrorism: A Legal Analysis of the Decision to Strike Sudan and Afghanistan}, 74 \textit{TUL. L. REV.} 1067, 1071–72 (2000).
opinion between various states about the use of violence in the context of conflicts over national liberation and self-determination.

In spite of its failure to define terrorism, the U.N. General Assembly adopted Resolution 40/61 in 1985, which condemned and criminalized all acts, methods, and practices of terrorism by whoever and wherever committed. This was a landmark resolution considering that previously, the international community had taken a piecemeal approach in addressing the problem of terrorism by identifying particular criminal acts as inherently terrorist in nature, to be prevented and punished by domestic law.

Language similar to that used in Resolution 40/61 was subsequently mirrored in a range of General Assembly and Security Council resolutions dealing with terrorism. Many of these resolutions state that terrorism is contrary to the purposes and the principles of the United Nations and represents a threat to international peace and security. The fundamental problem, however, lies in the distinction between unlawful and lawful force. This is especially problematic in light of the fact that the United Nations, in choosing to avoid defining terrorism conclusively, has either used the term in a more general sense or selected specific acts as constituting terrorist activity.

To date, efforts by the United Nations to draft a single broad definition of terrorism acceptable to all states, such as that found in the first ever penal instrument making terrorism an international offense—the League of Nations’ Convention for the Prevention and Punishment of Terrorism—have failed. Conventional international law on terrorism is presently limited to a relatively small number of widely accepted conventions that proscribe particular types of terrorism, which reflect

28. "The international conventions by and large address the form or target of the terrorist attack, rather than the terrorists themselves." Campbell, supra note 25, at 1071-72; see also Jeffrey F. Addicott, Legal and Policy Implications for a New Era: The "War on Terror," 4 SCHOLAR 209, 213–14 (2002).

customary norms of international law.\textsuperscript{30}

Some basic features that might contribute to an acceptable and working definition can be gleaned from the following definitions by various U.S. departments that encapsulate the basic aspects of terrorism:

- [T]he unlawful use or threatened use of force or violence by a revolutionary organization against individuals or property with the intention of coercing or intimidating governments or societies, often for political or ideological purposes.\textsuperscript{31}

- [T]he unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives.\textsuperscript{32}

- [P]remeditated, politically motivated violence perpetrated against non-combatant targets by subnational groups or clandestine agents.\textsuperscript{33}

- [V]iolent criminal conduct apparently intended: (1) to intimidate or coerce a civilian population; (2) to influence the conduct of a government by intimidation or coercion; or (3) to affect the conduct of a government by assassination or kidnapping.\textsuperscript{34}

The synthesis of these definitions is broadly consistent with most definitions in academic literature, which generally require two elements: actual or threatened violence against civilians or persons not actively taking part in hostilities and the implicit or explicit purpose of using the act to intimidate or compel a population, government, or organization into some course of action.\textsuperscript{35}

\textsuperscript{30} The most common types of terrorism covered by these conventions include crimes against the safety of civil aviation and maritime navigation, the taking of hostages, the use of nuclear and chemical weapons, and crimes against internationally-protected persons. These basic elements are supported by a proposed convention drafted by the International Law Association, which defines an
B. Counter-Terrorism Management Paradigms

The international confusion over a precise definition of terrorism and its collyorary, State-sponsored terrorism, has hampered any effective development in the discourse regarding acceptable counter-terrorism measures. General agreement by states at a philosophical level on what constitutes terrorism masks serious disagreements in practice.

Disagreements amongst states are not surprising in light of the fact that many factors contribute to the utility of terrorism not only by independent terrorist groups but also by some states. In its simplest terms, terrorism as a weapon has proven to be cheap and to have a synergistic effect in its impact. Like other forms of low-intensity warfare, terrorism is asymmetric warfare that breaks battlefield linearity by seeking and exploiting a combination of "spaces and timing" by avoiding a target State's strengths and attacking its vulnerabilities. Additionally, terrorism's effectiveness is increased by the very fact that it throws its victims off balance, forcing them to grope for an appropriate means of response.

States have historically initiated a legal response as their first reaction to international terrorist activities. From the legal perspective, managing the terrorist threat requires identification of the threat and a selection from the range of counter terrorism measures usually within the framework of international conventions that generally provide for domestic prosecution. Legal means to combat terrorism, however, often prove to be insufficient mechanisms for deterring future terrorist attacks. As a consequence, states have sought to wean themselves from a sole reliance on this paradigm. States have worked in earnest to develop new strategies within the rubric of international law to deal with terrorism by seeking to co-opt use of military force as a countermeasure against terrorism. Two general paradigms of counter-terrorism management have developed: 1) law

---

A ny serious act of violence or threat thereof by an individual whether acting alone or in association with other persons, organizations, places, transportation or communications systems or against members of the general public for the purpose of intimidating such persons, causing injury to or the death of such persons, disrupting the activities of such international organizations, of causing loss, detriment or damage to such places or property, or of interfering with such transportation and communications systems in order to undermine friendly relations among States or among the nationals of different States or to extort concessions from States.

enforcement—which is based on the concept of terrorists as primarily criminals and 2) conflict management—which treats terrorists as threats to national security. The Article turns now to consider these paradigms.

1. The Law Enforcement Paradigm

The United States has historically initiated a legal response as their first reaction to international terrorist activities. Legal mechanisms such as extradition and prosecution are primary examples of legal responses used by states against international terrorists.

Until recently, the law enforcement approach predominated counter-terrorism responses. This approach considers terrorist events as purely criminal acts to be addressed by the domestic criminal justice system. This entails domestic criminal law which is clearly within the authority of individual nations and grants no status—other than that of common criminal and common crime—to either those who commit terrorist acts or to the acts themselves. A law enforcement response triggers checks and balances of the criminal justice system, allowing for courts of law to uphold individual civil liberties by ensuring due process.

Under this paradigm, managing the terrorist threat requires identification of the threat and a selection from the range of counter terrorism measures usually within the framework of international anti-terrorist conventions. These conventions generally provide for prosecution through the aut dedere, aut judicare—extradite and prosecute—mechanism.

Despite the clear-cut positives that the domestic legal enforcement framework offers, it has proved to be inadequate. The possibility of dismissed charges or acquitted defendants is all too real and frequent. The absence of an effective international police agency and the reality

42. Id.

43. Id.
that the police in some states may be corrupt and/or ineffective or a state is willing to harbor terrorists renders this approach good in theory, but hopeless in practice.\textsuperscript{44}

2. The Conflict Management Paradigm

States have never relied solely on the law enforcement paradigm to combat terrorism because legal strategies often prove to be insufficient mechanisms for deterring future attacks.\textsuperscript{45} In the face of the seriousness of new and potentially devastating terrorist threats, there seems an urgent need to take action before an attack occurs rather than respond to an attack with legal action.\textsuperscript{46}

The perceived threat that terrorism poses to states has had a great impact on the policies used to thwart it, leading some states, particularly the United States and Israel, to seek to co-opt military force.\textsuperscript{47} This move has been accelerated by the proliferation of transnational terrorist groups with global reach. Terrorists now use more sophisticated and devastating weapons,\textsuperscript{48} seeking targets that inflict the greatest damage on human life and property.\textsuperscript{49} They “now look to multi-millionaires and entire nations for financial support.”\textsuperscript{50} With large “war chests,” terrorists have steadily developed their capabilities with a lethal combination of professionalism and advanced weaponry.

\textsuperscript{44} Id.
\textsuperscript{45} Raimo, supra note 37, at 1478.
\textsuperscript{48} See U.S. Counterterrorism Policy: Hearings Before the Senate Judiciary Comm., 105th Cong. 1 (1998) [hereinafter Counter-terrorism Policy Hearings] (statement of Louis J. Freeh, Director, Federal Bureau of Investigation) (announcing that the trend of international terrorism is to inflict the maximum amount of destruction to property and human life and create a sense of terror to gain media recognition).
\textsuperscript{49} See Tim Weiner, Man with Mission Takes on the U.S. at Far-Flung Sights, N.Y. TIMES, Aug. 21, 1998, at A1 (noting that Osama bin Laden, president of “Terrorist University,” provides major assistance to terrorist organizations and Islamic groups from his $250 million fortune).
\textsuperscript{50} Raimo, supra note 37, at 1479.
The advanced weapons available to terrorists pose an alarming national security threat, providing terrorists with the ability to destabilize entire regions... and to inflict massive harm against... citizens and property.\(^{51}\)

In view of the reality and threat posed by international terrorism, in the 1980s Israel and the United States began to suggest that terrorist acts might be approached from a conflict management paradigm, engaging the use of both lethal and non-lethal military force rather than exclusively from a law enforcement viewpoint. This was premised on the fact that the legal means available for confronting terrorism did not conform to the new nature of the international terrorism threat. Legal strategy, especially in a climate of state-sponsored terrorism, simply failed to deter international terrorists from acting and equally failed to discourage “rogue states” from availing safe havens and support.\(^{52}\)

The growing belief was that only the use of armed force would result in the degree of decisive action that would minimize the likelihood that offenders would go unpunished or be free to plan attacks.\(^{53}\) In the face of the Security Council’s inability to control the spread of international terrorism or deal with it effectively, Israel and the United States sought to circumvent, or stretch, the provisions of the U.N. Charter, arguing that they would legitimately use military force to counter terrorism. This was based on the reality that the reach and capabilities of some terrorist groups had transformed the landscape. Terrorists were now not simply criminals, but persons jeopardizing national security.\(^{54}\)

### III. LAW ENFORCEMENT PARADIGM: TERRORISM AS A CRIME

#### A. Anti-Terrorism Conventions: The Extradite or Prosecute Mechanism

Classifying international terrorism as a crime creates a dilemma because a “criminal act of terrorism to some will embody a legitimate act of self-determination to others.”\(^{55}\) At times, states have not strictly

\(^{51}\) Id. at 1480.

\(^{53}\) Travalio & Altenburg, *supra* note 4, at 99.

\(^{54}\) Gross, *supra* note 5, at 202; see also Sofaer, *supra* note 5, at 89–90.

\(^{55}\) Charles W. Kegley, Jr., *Introduction to INTERNATIONAL TERRORISM* 12 (Charles W. Kegley, Jr. ed., 1990) (quoting Christopher C. Joyner); *see also* Brian M. Jenkins,
applied the definition of international terrorism to foreign acts. Some acts are often recognized as legitimate actions of groups seeking self-determination. This method of defining terrorism is based on a political standard that leaves policymakers the discretion to decide which violent acts are acceptable and allows for the subjective definition of some terrorist groups as revolutionaries.\footnote{Raimo, supra note 37, at 1482–83.}

The overarching enforcement mechanism of each of these conventions is the requirement that states either extradite or prosecute the offenders.\footnote{Id.}

This pervasive “extradite or prosecute” scheme indicates that the purpose of the multilateral antiterrorist conventions is to punish and deter private actors rather than agents of states. This mechanism requires states to investigate and prosecute serious offenses. The state is given one of two choices once it obtains custody of the offenders. It may simply extradite an alleged offender, or, if a custodial state declines to extradite an alleged offender, it is required, without exception and whether or not the offense was committed in its territory, to submit the case to its competent authorities for the purpose of prosecution. The effort at the international level to criminalize terrorism and establish the “extradite or
prosecute” regime as the primary mechanism for law enforcement is also reflected in regional initiatives.\(^6^0\)

In an important development, in December 1985, the U.N. General Assembly adopted Resolution 40/61 which “unequivocally condemned, as criminal, all acts, methods and practices of terrorism whenever and by whomever committed.”\(^6^1\) The significance of this resolution lay in the fact that after thousands of terrorist orchestrated injuries and deaths, affecting nations across the world, the United Nations had moved to take away the “shield of legitimacy” behind which terrorists hid.\(^6^2\) The world had officially accepted terrorism, not as an expression of political ideologies, but as a crime\(^6^3\)—“[t]he acts which fell previously through the cracks of the multiple definitions were not to be specified, but labeled criminal as a whole.”\(^6^4\)

B. Bases of Extra-Territorial Criminal Jurisdiction

The international anti-terrorism treaties mentioned above prohibiting various acts of terrorism specify the obligation of states to extradite or prosecute perpetrators of acts defined as crimes under international law. In a bid to strengthen domestic capacity to implement the treaties, the traditional nationality and territorial link that facilitates the operation of domestic criminal jurisdiction is supplemented by three additional bases that seek to grant states extra-territorial jurisdiction in recognition of the extra-territorial nature of many terrorist acts. These are: the protective principle, the passive personality principle, and the universality principle.\(^6^5\)

\(^6^0\) The 1971 Organization of American States’ Convention to Prevent and Punish the Acts of Terrorism Taking the Forms of Crimes Against Persons and Related Extortion That Are of International Significance, Feb. 2, 1971, art. 1, 27 U.S.T. 3949, O.A.S.T.S. 37, developed a class of crimes known as “common crimes of international significance” which encompass: kidnapping, murder, or other assaults against the life or personal integrity of, or extortion related to such crimes against, “those persons to whom the state has the duty to give special protection according to international law.” \textit{Id.} The Convention provided in Article 5 that, if the state refuses to extradite the offender, the state must prosecute domestically “as if the act had been committed in its territory.” \textit{Id.} at art. 5.

\(^6^1\) G.A. Res. 40/61, \textit{supra} note 26, at 301.

\(^6^2\) Kash, \textit{supra} note 17, at 76.

\(^6^3\) Although the exact crimes to be considered terrorist acts were not designated, previously accepted conventions already provided some answers to that question. \textit{See supra} note 58 for a list of these conventions.

\(^6^4\) Kash, \textit{supra} note 17, at 76.

\(^6^5\) \textit{See} Christopher L. Blakesley, \textit{Jurisdictional Issues and Conflicts of Jurisdiction, in LEGAL RESPONSES TO INTERNATIONAL TERRORISM, supra} note 7, at 131, 139–40 (defining
These bases are important in not only facilitating the enforcement of international treaties, but also the passage of domestic legislation to implement and/or complement transnational treaty obligations. The Article will now turn to consider these.

1. The Protective Principle

The protective principle provides jurisdiction on the basis of a perceived threat to national security, integrity, or sovereignty by an extraterritorial offense. The protective principle permits a state to punish a limited class of crimes (excluding such offenses as violating laws against political expression) committed outside its territory by persons who are not its nationals: offenses directed against the security of the state or other offenses threatening the integrity of governmental functions that are generally recognized as crimes by developed legal systems. The focus of the protective principle is the nature of the interest that may be injured, rather than the place of the harm or conduct. Therefore, the conduct need only be a potential threat to the asserting state's interests or citizens.

The United States has passed several laws based on this principle. The discussion of the full range of legislative measures is beyond the scope of this Article. One legislation in this context is worth mentioning—the Omnibus Diplomatic Security Act in 1985 passed by the U.S. Congress. Its legislative history reveals that the drafters borrowed from some of the language in the protective principle. Congress allowed "an expansive reading of the principle which enables the U.S. and other nations to assert jurisdiction over essentially all attacks against its citizens and

the universality principle, the protective principle, and the passive personality principle).

66. See BLACK'S LAW DICTIONARY 1430 (8th ed. 2004) (defining "sovereignty" as "[t]he supreme dominion, authority, or rule; [t]he supreme political authority of an independent state; [t]he state itself").

67. See Blakesley, supra note 65, at 164–72 (defining and applying the protective principle to international terrorism).

70. Id. at 933.

71. 132 CONG. REC. S1,382–88 (daily ed. Feb. 19, 1986). The Act established the Bureau of Diplomatic Security within the State Department and called upon the Secretary of State to take all necessary actions to ensure the security of the United States in view of the vulnerability of U.S. facilities and U.S. nationals abroad.

72. For a concise discussion, see Kash, supra note 17, at 80, who notes that Congress realized that one-half of the terrorist incidents in the previous seventeen years were aimed at U.S. interests and citizens. Congress therefore sought to address "the protection of its citizens, the ability to maintain foreign policy, interstate and foreign commerce, and business travel and tourism."
interests even though there is no effect occurring within the territory of the forum state." 73

2. The Passive Personality Principle

The passive personality principle allows the extension of jurisdiction over offenders who victimize citizens of the particular nation seeking jurisdiction. 74 It permits a state to apply its laws to an act committed outside its territory by a person who is not its citizen when the victim of the act was its national. 75

This principle has been increasingly accepted worldwide as it is applied to terrorist and other organized attacks on a state’s nationals by reason of their nationality, or to assassination of a state’s diplomatic representative or other officials. 76

The case of United States v. Benitez 77 was one of the first to utilize the passive personality principle against a terrorist. The United States Court of Appeals for the Eleventh Circuit held that the passive personality principle could be used to establish jurisdiction in a case against a terrorist, not a U.S. citizen, who had robbed, assaulted, and conspired to murder U.S. Drug Enforcement Agency (DEA) agents in Columbia. 78

3. The Universality Principle

The most broadly worded jurisdictional base is the universality principle. It is premised on the notion that acts of terrorism are crimes against humanity and thus allow a state to prosecute an offender on behalf of the world. 79 This principle permits a state to define and

73. Id. at 80.
74. See Blakesley, supra note 65, at 172–78.
75. FOREIGN RELATIONS RESTATEMENT, supra note 68, § 402 cmt. g.
76. Kash, supra note 17, at 81; FOREIGN RELATIONS RESTATEMENT, supra note 68, § 402 cmt. g.
77. United States v. Benitez, 741 F.2d 1312 (11th Cir. 1984), cert. denied, 471 U.S. 1137 (1985). The principle was also at play in United States v. Yunis, 924 F. 2d 1086 (D.C. Cir. 1991), wherein the court applied the passive personality principle codified in the Hostage Taking Act, 18 U.S.C. § 1203 (West 1984). The United States was able to assert jurisdiction as two of the passengers on the hijacked Royal Jordanian Airlines plane were U.S. citizens; thus the United States could prosecute Yunis, who led the Lebanon’s Amal Militia in the hijacking, because “the offender or the person seized or detained (was) a national of the U.S.” Id.
78. Benitez, 741 F.2d at 1316.
79. See Blakesley, supra note 65, at 139–40.
prescribe punishment for certain offenses recognized by the community of nations as of universal concern, such as piracy or hijackings, where there is no connection between the territory and the offense or the nationality of the persons involved. 80 Therefore, the location of the terrorist act is irrelevant, as are the nationalities of both the offender and offended. The crimes encompassed by this principle are considered so brutal and heinous that any state within the community of nations may prosecute the accused. 81

Whether or not the universality principle applies to "treaty crimes" which predominantly include terrorist related offenses encapsulated in international and domestic laws remains a subject of great debate and, not infrequently, controversy. Domestic jurisprudence generally shies away from recognizing universal jurisdiction as establishing the basis for prosecuting overseas terrorist crimes. Thus, in 1984, in Tel-Oren v. Libyan Arab Republic, the United States Court of Appeals for the District of Columbia ruled that terrorism did not constitute a violation of the law of nations. 82

C. Use of Non-Lethal Force: Apprehension of Terrorists in International Space

Even though most states have voluntarily undertaken to prosecute or extradite persons for the most common terrorist crimes such as air piracy and sabotage, "[w]hen States violate these obligations, and especially when they are implicated in the conduct of the terrorists involved, other States are seriously affected." 83 A state which directs agents or allied entities

80. FOREIGN RELATIONS RESTATEMENT, supra note 68, § 404. "Like the pirate of yore, the terrorist is imagined to be the enemy of all (civilized) mankind and therefore subject to capture by any state and subject to every state's jurisdiction." See Travahlo & Altenburg, supra note 4, at 105–06.

81. Universal jurisdiction allows any nation to prosecute offenders for certain crimes even when the prosecuting nation lacks a traditional nexus with the crime, the alleged offender, or the victim. Courts developed this doctrine centuries ago to address piracy and later extended it to cover slave trading. The pirate and slave trader were deemed hostis generis humanis—the enemy of all people. The history of crimes, treaties, and conventions to combat terrorism, and domestic laws of all nations, "when considered as a whole, make it clear that terrorism—including hostage taking or kidnapping or wanton acts of violence against innocent civilians—is really a composite term including all of the separately universally condemned offenses, and thus triggers the universality theory of jurisdiction." Blakesley, supra note 65, at 915.

82. Tel-Oren v. Libyan Arab Republic, 726 F.2d 774, 795 (D.C. Cir 1984), cert. denied, 470 U.S. 1003 (1985). While just one example, Tel-Oren carries the general tenor of domestic jurisprudence that acknowledges terrorism is an activity that attracts international condemnation, but nonetheless permits them to be viewed as either legitimate means of political protest or labeled as a criminal offense. See also Blakesley, supra note 69, at 795–96.

83. Sofaer, supra note 5, at 106–07.
to attack diplomats abroad or to take hostages within its own borders obviously will not order the extradition or prosecution of these perpetrators.\textsuperscript{84} Often, the sad reality is that some nations of the world refuse to condemn terrorism and/or condone it.

The impact of political considerations in the extradition process, and the various degrees of assistance and support some nations provide to terrorist groups, make it virtually impossible to gain custody of terrorists using traditional methods.\textsuperscript{85}

As a result, barring extraordinary intervention, perpetrators can escape criminal sanctions for the conduct proscribed in multilateral antiterrorist conventions as well as under domestic legislation. Nations victimized by terrorists are thus left with no choice but to occasionally assert themselves forcefully in order to apprehend terrorists and bring them to the abducting state for prosecution.

An abduction is the forcible, unconsented removal of a person by agents of one state from the territory of another state. Professor M. Cherif Bassiouni’s assertion that international abductions violate international law by disrupting world order and infringing upon sovereignty and territorial integrity of other states is illustrative of customary international law.\textsuperscript{86} This is in light of the fact that sovereignty is one of the most fundamental attributes of international law. Under international law, the government of one country cannot conduct activities in the territory of another country unless acting with the consent of that nation.\textsuperscript{87}

\textsuperscript{84} A similar situation occurred during the Iranian hostage crisis of 1979, when militant students, with the acquiescence of the Iranian government, seized the U.S. Embassy and forty-three hostages in Tehran. The International Court of Justice held that the seizure violated two treaties on consular relations, but did not refer to the Hostage Convention. United States Diplomatic and Consular Staff in Tehran (U.S. v. Iran), 1980 I.C.J. 3 (May 24).

\textsuperscript{85} Id. at 85; D. Cameron Findlay, Abducting Terrorists Overseas for Trial in the United States: Issues of International and Domestic Law, 23 TEX. INT’L L.J. 1, 50 (1988).

\textsuperscript{86} M. Cherif Bassiouni, INTERNATIONAL EXTRADITION AND WORLD PUBLIC ORDER 124 (1974). Cf. Andrew Wolfenson, The U.S. Courts and the Treatment of Suspects Abducted Abroad under International Law, 13 FORDHAM INT’L L.J. 705, 707 (1989–90) (asserting that this is customary law, which is subject to change and modification by continued practice within the international community). Kash argues that abductions have a degree of acceptance under international law. Kash, supra note 17, at 82. The author disagrees with the assertion. Recognition of a given fact is one thing; acceptance is another.

\textsuperscript{87} See FOREIGN RELATIONS RESTATEMENT, supra note 68, § 432 cmt. b (explaining the infringement of sovereignty).
1. "James Bond" Style Operations

a. "Operation Golden Rod"

On June 11, 1985, Fawaz Yunis and four other terrorists boarded Royal Jordanian Airlines Flight 402 armed with hand grenades and automatic weapons. While the plane was on the ground in Beirut, Lebanon, Yunis took control of the cockpit and forced the pilot to take-off. The others tied up Jordanian air marshals and held the passengers hostage, including two American citizens. Subsequently, an American investigation led to Yunis, and "Operation Goldenrod" was put into effect. Undercover FBI agents lured Yunis onto a yacht in the eastern Mediterranean Sea with promises of a drug deal. He was arrested and transferred to a U.S. Navy ship where he was interrogated for several days. After arriving in Washington, D.C., Yunis was arraigned on charges of conspiracy, hostage taking, and aircraft damage.

Commenting on the international legal duty of states to prosecute or extradite hijackers, such as in the case of Yunis, District Judge Barrington Parker observed that nations cannot be permitted to seize terrorists anywhere in the world in an unregulated manner. Governments must act in accordance with international law and domestic statutes. He noted, however, that where a state such as Lebanon, is "incapable or unwilling...[to] enforce its obligations under the [Montreal] Convention," or when a government "harbors international terrorists or is unable to enforce international law, it is left to the world community to respond and prosecute the alleged terrorists."

b. The Achille Lauro Incident

On October 7, 1985, Palestinian terrorists hijacked the Italian Cruise Ship Achille Lauro while it was sailing the Mediterranean Sea with more than four hundred people on board. It was announced the following

89. Id.
90. Id.
91. Id.
92. Id.
93. Id.
94. Id. A grand jury added additional aircraft damage counts and a charge of air piracy. Under the Hostage Taking Act, supra note 77, since two of the passengers were U.S. citizens, the United States was able to assert jurisdiction as "the offender or the person seized or detained (was) a national of the U.S." The court permitted the United States to assert jurisdiction by relying on the universal and passive personality principles of international law jurisdiction.
day that the terrorists who had commandeered the ship were members of
the Palestine Liberation Front. The hijacking lasted two days, during
which time a disabled American was murdered and thrown overboard.97
The hijackers surrendered to a representative of the Palestine Liberation
Organization and were guaranteed safe conduct out of Egypt to an
undisclosed location.98 As the terrorists were being flown out of Egypt
in an Egyptian airliner with Egyptian security men aboard, American
naval forces intercepted the plane and forced it to land in Italy at a joint
Italian-NATO airbase.99 It was immediately surrounded by American
commandos. The commandos, in turn, were surrounded by Italian soldiers.100
After a tense standoff between U.S. and Italian forces, the Italians seized
the hijackers along with Abbas and took them into custody pursuant to
an agreement reached by the American and Italian governments.

Reacting to this incident, international law expert Andreas Lowenfeld
asserted: “[W]e did not violate anybody’s air space, we didn’t hurt anybody,
and so I think we didn’t violate international law.”101 While intercepting
an Egyptian airliner might in itself be a violation of international law,
the breach of international law by Egypt in not taking the terrorists into
custody and either extraditing or prosecuting them, according to
Lowenfeld, prompted America’s justifiable response to a “worse breach”
by Egypt.102

The author concludes by noting that seizures of suspected terrorists
overseas arguably constitutes a serious breach of the territorial sovereignty

98. Id.
100. The Italians brought criminal charges against the terrorists, but refused
American requests to hold Abbas for investigation due to lack of evidence. The day after
American arrest warrants were issued for Abbas and the four hijackers, Abbas was
allowed to leave Italy aboard a Yugoslavian jet. For details of the enfolding drama, see
generally Ross Laver, Striking Back, MACLEAN’S, Oct. 21, 1985, at 32, 36; Jill Smolowe,
Piecing Together the Drama, TIME, Oct. 28, 1985, at 31; John Tagliabue, Italians
101. Stuart Taylor, Jr., Plane Diversion Raises Legal Issues, N.Y. TIMES, Oct. 11,
1985, at A11.
102. Id. Many of these same arguments can apply to Italy, Yugoslavia, South
Yemen, and Iraq for their assistance in helping Abbas avoid extradition and escape
justice. The fact that only America wanted to prosecute all of the terrorists, including
Abbas, suggests that the other nations had motives other than seeking justice for all of
the participants involved in the hijacking.
of another nation and a violation of international law.\textsuperscript{103} In other words, abducting terrorists in another country’s territory by unauthorized law enforcement agents infringes upon a nation’s sovereignty and breaches international law.\textsuperscript{104} This generally creates fertile ground for adverse reciprocal treatment among nations. The consequences of infringing on the sovereignty of another nation may increase tension between states and weaken the fight against overseas terrorism through the use of international law.\textsuperscript{105}

2. Legal Dimensions Relating to Abduction

a. Breach of State Responsibility

Customary international law holds that a state is normally responsible for those illegalities which it has originated.\textsuperscript{106} A state does not bear responsibility for acts injurious to another state committed by private individuals when the illegal deeds do not proceed from the command, authorization, or culpable negligence of the government.\textsuperscript{107} A state,
however, is vicariously responsible for every act of its own forces, of the members of its government, of private citizens, and of aliens committed on its territory. If the state neglects the duties imposed by vicarious responsibility, it incurs original liability for the private acts and is guilty of an international delinquency. 108

Under international law, once a government has notice that its territory is being used for the preparation of hostile acts in or against another state, it must take effective steps to prevent those acts in order to satisfy its duty. 109 Due to this, Professor Derek Bowett asserts that sending agents into a state’s territory, specifically targeting an individual who, like a terrorist, is a criminal, does not violate the territorial integrity or political independence of the state. 110

In any event, the actions of espionage or law enforcement agents within a nation’s territory, though attracting strong condemnation, have never been considered a use of force under international law. 111 This would appear then to provide reasonable grounds for the assertion by Professor Bowett. 112 Bowett’s position finds support in Abraham D. Sofaer’s postulation: “[A] state may cross the border of another state in order to capture a terrorist, and this act will not necessarily be considered a violation of that state’s sovereignty.” 113

b. Self-Defense

Article 51 of the U.N. Charter states that “nothing in this present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations.” One school of thought, led by Professor Bowett, asserts that the customary right of self-defense allows a state to use force not only to defend against an armed attack by another state, but also to protect the lives or property of nationals or to ensure a state’s political independence.

108. Maogoto, supra note 19, at 416.
109. Findlay, supra note 85, at 23; see G.A. Res. 2625, supra note 106.

111. See id. at 56, where Professor Brownlie argues that actions specifically directed against individuals within the territory of a state do not violate the territorial integrity or political independence of that state.
112. BOWETT, supra note 110.
113. Kash, supra note 17, at 79.
against nonmilitary threats.\textsuperscript{114} Taken to its logical extreme, this argument supports the proposition that injuring civilians in a foreign country may amount to an “armed attack” (in as far as citizens and property are assimilated to the state), as required by Article 51 of the U.N. Charter, in response to which one may engage in self-defense.\textsuperscript{115}

Seizures of suspected terrorists overseas by U.S. officials arguably constitute a serious breach of the territorial sovereignty of another nation and a violation of international law.\textsuperscript{116} This is because sovereignty is one of the most fundamental attributes of international law.\textsuperscript{117} Under international law, the government of one country cannot simply conduct activities in the territory of another country—consent of the latter country is required.\textsuperscript{118}

c. The Ker-Frisbie Doctrine

U.S. courts have developed what is known as the “Ker-Frisbie Doctrine,” which holds that a forcible abduction neither offends due process nor requires a court to free a suspect seized in violation of international law.\textsuperscript{120} Therefore, a court need not divest itself of \textit{in personam} jurisdiction over a defendant based on the method by which the defendant was arrested and brought before the court.\textsuperscript{121}

Additionally, American law enforcement officials, relying on statutes making terrorist attacks on Americans overseas federal crimes, like to refer to abductions as “arrests.” Yet, despite such court rulings and classifications:

The availability of a U.S. law on which to base the issuance of a warrant may provide law enforcement personnel with the authority to act under U.S. law; it provides no authority, however, to act under either international law or the law of the State whose territorial sovereignty is breached. To be acceptable under international law an abduction must satisfy far more exacting standards than the mere availability of an arrest warrant issued by the State responsible for the action.\textsuperscript{122}

In a bid to tone down the vitriolic tenor of condemnation from the international community regarding infringement of territorial integrity,
the United States generally has sought to orchestrate abductions in international airspace and in international waters. According to former U.S. Secretary of State George Shultz:

[I]t is absurd to argue that international law prohibits us from capturing terrorists in international waters or airspace, [or] from attacking them on the soil of other nations. ... A nation attacked by terrorists is permitted to use force ... to seize terrorists or rescue its citizens when no other means is available.\textsuperscript{123}

This is based on the argument that intercepting an aircraft in international airspace will likely not rise to the level of a "threat or use of force against the territorial integrity or political independence of any state" within the meaning of Article 2(4) of the United Nations Charter.\textsuperscript{124} In a spirited defense of the U.S. position, Abraham D Sofaer asserts:

The principle of territorial integrity is a major—and proper—legal constraint to taking actions against terrorists or States that support terrorism. World-class terrorists need bases in which to live and work, to train, to store their weapons, to make their bombs, and to hold hostages. The States in which they locate are almost invariably unable or unwilling to extradite them. An extradition request in such cases will do nothing more than reveal that we know their location, an advantage that would thereby be squandered. The only possible remedies against such terrorists often would require infringement of the territorial integrity of the State in which they are located.\textsuperscript{125}

As stated above, seizures of suspected terrorists overseas by U.S. officials, absent consent, arguably constitute a serious breach of the territorial sovereignty of another nation and a violation of international law.\textsuperscript{126} In a bid to address the inevitable outrage that abductions attract, U.S. cases have held that a court would lose its jurisdiction only if the methods of abduction were "deliberate, unnecessary and [an] unreasonable invasion of the accused’s constitutional rights."\textsuperscript{127} Additionally, U.S. courts have held that in order for a court to surrender its jurisdiction, the agents' conduct must be of a "most shocking and outrageous character," a

\begin{itemize}
\item \textsuperscript{124} Kash, \textit{supra} note 17, at 84.
\item \textsuperscript{125} Sofaer, \textit{supra} note 5, at 106.
\item \textsuperscript{126} See \textit{FBI Authority to Seize Suspects Abroad}, \textit{supra} note 116. At sovereignty's core lies the notion that supreme authority within a territory lies with the State, which is the political institution in which sovereignty is embodied. Two facets hinge at sovereignty's core, "internal" and "external." Sovereign authority is exercised within borders, but also, by definition, with outsiders, who may not interfere with the sovereign's governance or right to control.
\item \textsuperscript{127} U.S. v. Toscanino, 500 F.2d 267, 275267 (2d Cir. 1974), \textit{reh’g denied}, 504 F.2d 1380 (1974).
\end{itemize}
classification limited to "torture, brutality and similar outrageous conduct."  

In sum, the political and legal reality is that abductions are controversial, politically risky, and dangerous to the individuals assigned the task. The forcible removal of a person, especially protected by a state hostile to the state conducting the abduction, will be treated as criminal conduct, amounting at the least to a kidnapping. Where the State from which the person is taken is not hostile but refuses to extradite the person seized for reasons of policy, abduction is likely to cause a severe strain on relations.  

IV. CONFLICT MANAGEMENT: AN EYE FOR AN EYE

A. Terrorists as Warriors: Combatants or Non-Combatants

In December 1973, the U.N. General Assembly passed Resolution 3103, which granted legitimacy to conflicts involving the struggle of people against colonial and racist regimes by labeling them as "armed conflicts." In essence, it classified participants in such conflicts as legal combatants. One year later, the United Nations adopted a definition of Aggression, which justified terrorist activities when terrorism is waged on behalf of self-determination movements or directed against colonial and racist regimes.

Many groups have tried to fall within the scope of justified aggression under the U.N. definition by claiming that their actions are legal expressions of their rights. The United Nations has thus contributed to the already
muddied discourse on terrorism by seeming to grant a limited amount of legitimacy to groups who are responsible for acts that have been labeled "terrorism." Matters are not helped by states that often give mixed signals either in condemnation or in tacit support of certain acts that would appear to fall in the category of terrorism. The end result is the international community's failure to consistently interpret an act as an unlawful terrorist attack or a legitimate act of a freedom fighter.

1. Slippery Legal Ground: Positioning the Terrorist in the Law of Armed Conflict Framework

International law distinguishes between those who participate in the armed conflict and those who do not, as do the various Geneva Conventions. Generally, soldiers fall within the former definition, as indeed do members of other armed militias. These Conventions also afford defenses to combatants who have been captured by the enemy during the course of the fighting by classifying them as prisoners of war.

The various Geneva Conventions, however, do not refer to the legal status of civilians who do not fall within the scope of the term "combatant," yet take an active part in the fighting. Recognition of the need for such a definition grew with the proliferation of civil wars and revolutionary and/or national liberation movements in the 1960s and 1970s, necessitating a need for the law of armed conflict to cover these belligerent groups and thus strengthen adherence to international nature of non-combatants or protected persons. Terrorism is generally directed at persons who are not combatants; the usual targets are not military personnel or government officials. The difficult question that continues to persist is: What is the status of the terrorist in international law? For mention of this conundrum, see, e.g., Alberto R. Coll, The Legal and Moral Adequacy of Military Responses to Terrorism, 81 AM. SOC’Y INT’L L. PROC. 297, 298 (1987); Emanuel Gross, Terrorism and the Problem of Administrative Detention in Israel: Does a Democracy have a Right to Hold Terrorists as Bargaining Chips?, 18 ARIZ. J. INT’L & COMP. L. 721 (2002).

134. See Geneva Conventions, supra note 58.

135. Geneva Convention Relative to the Protection of Civilian Persons in Time of War, supra note 133, 75 U.N.T.S. at 288-292. Civilians are protected in situations of struggle, and states participating in the war are under an obligation to prevent any possible harm or suffering to such civilians.

136. Id.

137. Id.

humanitarian law. Accordingly, in 1977, this issue was addressed in Additional Protocol I to the 1949 Geneva Conventions.\(^{139}\) The amended Geneva Conventions now provided prisoner of war protection for fighters who did not fall within the classic structure of conventional wars—the guerilla or freedom fighter.

Even with regard to these other groups, it is contemplated that the fighters are "rebel groups" or "non-state actors," such as organized armed militia or paramilitary groups, with an element of organization and command structure approximate to or inherent in armed forces, especially of a political or revolutionary color. Importantly, they should conduct themselves in accordance with the rules of combat in international law in order to benefit from the various protections.\(^{140}\) It is evident from the final draft of the Protocol that

[The] protection of the interests of the civilian population was preferred over full protection of freedom fighters. The requirements that those freedom fighters refrain from intermingling with the civilian population, that they wear uniforms or other recognizable means of identification, and that they carry their weapons openly, were specifically intended to ensure that other parties to the conflict would know against whom they were fighting. These requirements were meant to ensure that civilians who were not combatants would not be endangered.\(^{141}\)

Where then do terrorists fall? They are an enemy, but they do not comprise soldiers of a state or belligerent group; they wear no uniforms, have no fixed bases, and pursue uncertain goals with terror as their weapon of choice.\(^{142}\)

Israel, the United States, and the United Kingdom all refused to sign Additional Protocol I. They argued, \textit{inter alia}, that it would enable terrorist organizations to be recognized as combatants, and thereby allow them to be granted the rights of prisoners of war.\(^{143}\) In their view it was not desirable to grant terrorists rights, such as the right not to be tried for their actions.\(^{144}\)

\(^{141}\) Gross, \textit{supra} note 5, at 203.

\(^{143}\) Gross, \textit{supra} note 5, at 5.

\(^{144}\) Professor Frits Kalshoven, who participated in a 1985 panel on the question
Terrorism does not exactly comport with the definition of war.\textsuperscript{145} Some scholars, however, classify it as irregular or low intensity warfare that involves armed attacks against both government and non-government personnel for political purposes.\textsuperscript{146} In this regard, approaching certain acts of terrorism as a war\textsuperscript{147} may be a more appropriate tack because the military is better equipped for low intensity warfare and is not limited by restrictions placed on law enforcement.\textsuperscript{148} Based on this reality and policy considerations, and despite the legal and political murkiness surrounding the status of terrorists in the context of the legal framework governing armed conflict, the maturation of international terrorism led the United States to increasingly perceive transnational terrorism as acts of war.\textsuperscript{149}

\textbf{B. Limited Lethal Military Force: Assassinations or "Surgical Strikes"}

Assassination in historical context, and in the light of its usage in the laws of war, is, simply, "any unlawful killing of particular individuals for political purposes."\textsuperscript{150} This position accords with the view that "[e]nemy combatants who fall into the hands of a state . . . may not be summarily

\textsuperscript{145} See \textit{Black's Law Dictionary}, supra note 66, at 1583 (defining "war" as a "hostile contention by means of armed forces, carried on between nations, states, or rulers, or between citizens in the same nation or state").

\textsuperscript{146} Malloy, supra note 105, at 299 (asserting that the military should destroy terrorist planning and training facilities in nations harboring those terrorists).

\textsuperscript{147} Id.

\textsuperscript{148} Id. at 287 (arguing that the use of military action against terrorism as a form of low intensity warfare would be more effective and beneficial in long-term deterrence, short-term prevention, and punishment than political, diplomatic, economic, and legal responses).

\textsuperscript{149} See 144 Cong. Rec. S3002-3 (daily ed. Apr. 1, 1998) (statement of Sen. Domenici) (emphasizing that the international terrorist threat is not the same as in the past).

\textsuperscript{150} Sofaer, supra note 5, 117.
executed, however heinous their personal misdeeds. This rule, however, has never “preclude[d] attacks on individual soldiers or officers of the enemy whether in the zone of hostilities, occupied territory, or elsewhere.” Such attacks have been accepted as legal without significant controversy.

The Hague Convention of 1907, which has become binding customary international law, prohibits the killing of individuals belonging to the other side through the use of treacherous or deceitful means during the course of the war. This prohibition is reaffirmed in Article 37 of Additional Protocol I to the Geneva Conventions of 1949. The United States encapsulates the international law position through national proclamations and laws.

Despite international and domestic prohibition, assassination is seen as having several advantages. They include pulverizing tactical and organizational capability, preempting attacks, meting out justice to operational commanders, and limiting collateral damage that inevitably results from large-scale military incursions. These practical and operational attractions have led the United States to occasionally use assassination.

This was evident on November 4, 2002 when an unmanned CIA Predator drone in Yemen launched two “Hellfire” missiles striking a car carrying Al Qaeda operatives, including the Al Qaeda chief in that...

Assassination, however, is a highly controversial counter-terrorism measure in view of the fact that states are obliged by international law not to carry out assassinations. The United States and Israel claim that occasionally operational necessities override the law, as "surgical strikes" target the brains behind terrorist activities and thus offer a discriminating counter measure that limits collateral civilian casualties often found in larger scale military operations.\footnote{Sofaer, supra note 5, at 116–21.}

There is both legal and moral distaste, however, for official killing and, especially, the intentional killing of specific individuals for political and policy reasons.\footnote{Gross, supra note 5, at 224; see Jami Melissa Jackson, The Legality of Assassination of Independent Terrorist Leaders: An Examination of National and International Implications, 24 N.C. J. INT'L L. & COM. REG. 669, 686–87 (1999).}

1. Assassination: Moral Dilemma but Effective Response?

From a tactical standpoint, a limitation on assassination undoubtedly disadvantages states in a contest with states or groups that routinely resort to murder, even of citizens having nothing to do with their political objectives. The major dilemma is whether there can be a proper use of assassination?

It is accepted that in domestic cases of terrorism, the state is entitled to use force against terrorists operating within its own territory. Even this entitlement, however, is subject to constraints. If no imminent danger is anticipated, it is forbidden to use force against the terrorists. A terrorist may not be killed for his past actions, thereby preventing him from realizing his right to a fair trial.\footnote{Gross, supra note 5, at 224.}

In other words, force may not be used against a terrorist as a punitive act, but only as a preemptive act. Similarly, the state is bound and subject to a number of core human rights, both under international and domestic law, that are eviscerated when terrorists (actual or suspected) are assassinated.\footnote{Sofaer, supra note 5, at 116–21.}

Whether or not the assassination of terrorists or perceived terrorists is justified presents not just a legal dilemma but a moral one as well:
If the killing of terrorists will prevent the death, or serious injury, of many innocent people, then, at least according to the principle of moral utilitarianism, it would seem possible to kill them. The justification of any action as proper, according to this approach, is determined by whether the action will lead to the best possible result among all the possible outcomes in that situation. In other words, one must aspire to the maximum general good in each and every situation. If the good result ensuing from the performance of the act outweighs the bad ensuing from it, then it must be performed, irrespective of whether the act entails killing, torture, or the like.

But even in the case of ticking bomb situations that Gross's above quotation seems to allude to, that a particular terrorist will cause great damage or deaths of innocent civilians must be proved to a relatively high degree of certainty.\footnote{Id. at 229–30.}

The decision to foil a terrorist act by killing the terrorists must be made with thorough consideration and after exhausting all other possible actions. If there is no other reasonable way of preventing the terrorist action and it is possible to kill enemy soldiers who are about to attack one's army, then it is possible to kill the terrorists.\footnote{Id. at 234.}

Attacks aimed at specific individuals potentially involve claims of "assassination," which is prohibited under international law. Prohibiting "assassination" is legally, militarily, and morally sound. Assassination is, in essence, intentional and unlawful killing—murder—for political purposes. Besides the use of limited force, states often respond with large scale military force in situations where terrorist acts are tied to state-sponsors. The Article next turns to an analysis of this measure.

\section*{C. Large-Scale Military Force: Terrorism as an Act of War}

In the early years of the United Nations, the use of military force as a counter-terrorism measure was debated almost entirely in terms of Israeli counter-terror practice.\footnote{Id. at 234.} Many emphasized that Israel's defiance of the United Nations and U.N. war-decision law destroyed respect for the United Nations and international law. U.N. debates emphasizing the illegality of the preemptive character of the Israeli actions, however, suffered from a tendency to mix \emph{jus ad bellum} with \emph{jus in bello}, thus preventing development of any meaningful discourse.\footnote{Id. at 234.}

\footnote{163. Id. at 229–30.}
\footnote{164. Id. at 234.}
\footnote{165. Id. at 234.}
\footnote{166. This is not surprising considering that a Palestinian group (the militant Popular Front for the Liberation of Palestine) was responsible for hijacking an Israeli El Al commercial flight on July 22, 1968—the incident that is considered to mark the beginning of the current era of international terrorism. As Dr. Bruce Hoffman notes, "[a]lthough commercial planes had often been hijacked before, this was the first clearly political hijacking." Hoffman, supra note 14.}
\footnote{167. Many thorny questions relating to the Arab-Israeli Conflict served to split the international community regarding the use of military force against an uncertain mosaic
The debate on the use of military force was renewed with the U.S. attack on Libya on April 15, 1986, causing a different dimension of the complexities of the Arab-Israeli conflict to come to light. The United States (whose interests and citizens were and are a primary target of terrorists) replaced Israel in the classic confrontation between the Security Council’s restrictive view of counter-terror self-defense and the concomitant permissive view of war of national liberation terrorism, as well as the long-held Israeli view of the efficacy of counter-terror self-defense and deterrence.

The United States had reached the conclusion that counter-terror self-defense and deterrence warranted preventive/retaliatory military attacks. The new U.S. policy was of particular interest as it was unencumbered by the political and legal complexities of Israel, which was involved in a war against terror, suppression of resistance, and obligations of an occupying power—all on one tapestry.

1. The Cold War Era: Terrorist Action and Reaction

   a. State Responsibility

It is beyond dispute that states are directly responsible under international law for controlling terrorists operating within their borders and have a responsibility to refrain from actively supporting terrorist organizations. As early as 1970, the U.N. General Assembly, in Resolution 2625, made it clear that a state’s mere acquiescence in terrorist activity emanating from its soil is a violation of the state’s international obligations. Numerous other resolutions from both the U.N. General Assembly and the U.N. Security Council and other contemporary international instruments leave no doubt that harbor ing or supporting

of a war of national liberation and a war against terrorism. Many difficult issues surround the conflict, which pose a number of complex issues including: Doesn’t international law permit an insurgent force directed toward support of fundamental rights and rules? Aren’t insurgents entitled to use certain levels and types of force against a regime that represses their peremptory right to “self-determination” and hence “national liberation?” Isn’t Israel necessarily bound to whatever its preservation and safety require? Hasn’t a kind of holy war warrant been extended to the PLO where jus ad bellum judgments about the war of national liberation have swallowed up any concern for the war-conduct, jus in bello issues?

169. G.A. Res. 2625, supra note 106.
170. See, e.g., G.A. Res. No. 40/61, supra note 26; S.C. Res. 748, U.N. SCOR, 47th
terrorist groups violates a state’s responsibility under international law.\textsuperscript{171}

Several decisions of arbitral tribunals have granted substantial damages against states in the past for failing to prevent persons within their jurisdictions from conducting hostile activities against other states. Primary examples include the $15,500,000 awarded to the United States in the late 19th century in a proceeding against Britain for allowing a Confederate warship \textit{(The Alabama)} to be completed and to leave British territory.\textsuperscript{172}

Similarly, in the Texas Cattle Claims arbitration, the United States successfully pursued a claim against Mexico with regard to the actions of Mexican-based outlaws and military personnel. The American-Mexican Claims Commission found Mexico liable on four legal bases for raids into Texas by outlaws or military personnel, namely:

\begin{itemize}
  \item (1) active participation of Mexican officials in the depredations;
  \item (2) permitting the use of Mexican territory as a base for wrongful actions against the US and the citizens thereof, thus encouraging the wrongful acts;
  \item (3) negligence, over a long period of years, to prosecute or otherwise to discourage or prevent the raids; and
  \item (4) failure to cooperate with the Government of the US in the matter of terminating the condition in question.\textsuperscript{173}
\end{itemize}

The position by the arbitral tribunals has been reaffirmed by the International Court of Justice (ICJ). In the \textit{Corfu Channel Case} as well as the \textit{Iran Hostage Case}, the ICJ found that Albania and Iran, respectively, had a duty under international law to make every reasonable effort to prevent illegal acts against foreign states.\textsuperscript{174} They had acted unlawfully by knowingly allowing their territory to be used for illegal acts.\textsuperscript{175} In the setting of terrorism, the circumstances are much the same; a state is bound under international law to prevent the use of its territory as a base

\textsuperscript{171} In November 2001, the International Law Commission completed work on its Draft Articles on the Responsibility of States for Internationally Wrongful Acts. Article 8 of these Draft Articles provides:

\textit{The conduct of a person or group of persons shall be considered an act of a State under international law if the person or group of persons is in fact acting on the instructions of, or under the direction or control of that State in carrying out the conduct.}

\textit{Id.}

\textsuperscript{172} This vessel subsequently distinguished itself as the most successful Confederate raider by capturing or destroying more than sixty Union vessels. \textit{John B. Moore, A Digest of International Law} 999 (1970).

\textsuperscript{173} American Mexican Claims Comm’n, \textit{Report to the U.S. Sec’y of State}, reprinted in \textit{Marjorie M. Whitteman, 8 Digest of International Law} 748, 753 (1967).

\textsuperscript{175} \textit{Id.}
or sanctuary. The nature of the terrorist threat, however, dictates decisive action by a state to deal with the menace and forecloses a wait to facilitate the use of peaceful avenues.

The idea that if a state is unable to or unwilling to effectively police its territory, then a victim state can reach across borders and take necessary action, was not a new one. In 1818, when the U.S. sent troops into Spanish Florida, it established the right to enter the territory of another state to prevent terror attacks where the host was unable or unwilling to quell a continuing threat.176

In contemporary times, the same problem of state sponsorship of illegal activity that includes offering safe haven and enhancing capabilities of insurgents persists, only the threat—international terrorism—is more urgent. This strikes at the heart of a nation’s duty to protect its citizens and national interests. States that sponsor terrorism have a great capacity to evade responsibility relating to the actions of terrorist groups they support.

For years states have supplied funds, arms, and sanctuary to known terrorist organizations without being treated as having responsibility for the terrorist actions. In such situations, states claim they have no knowledge of or do not support terrorist actions, and they explain their support for the groups involved on the ground that the groups have other, legitimate purposes.177

The end result is that states that sponsor terrorism attempt to protest that they are at “arms-length” and thus not part and parcel of the terrorist enterprise. Even in situations where state complicity is established, states often claim that they have warned suspected terrorist organizations that they will expel them if proved guilty of a terrorist act.178

176. For years, southern plantation owners and white farmers lost runaway slaves to the Florida swamps with friendly Seminole and Creek Indians who offered refuge to the slaves and led raids against white settlers. The U.S. government could do little about the problem because the swamps lay deep within Spanish Florida. President James Monroe directed General Andrew Jackson to proceed against the Seminole Indians, with the explanation that the Spanish were bound by treaty to keep their Indians at peace, but were incompetent to do so. Jackson invaded Florida in 1818, burned Seminole villages, hanged tribal leaders, captured Pensacola, and deposed the Spanish governor. See JOHN B. MOORE, 2 A DIGEST OF INTERNATIONAL LAW 404 (1906).

177. Sofaer, supra note 5, at 100–101.

i. Attacks on Terrorist Infrastructure and Camps

In December 1985, several airline passengers were killed by terrorists in simultaneous attacks at the Rome and Vienna airports, including five Americans; many more were wounded. Immediately after these attacks in which several civilians were killed, the Libyan leader Muammar Qadhafi labeled the killers as "heroes." The United States was incensed and moved swiftly to impose drastic sanctions short of force. Then, U.S. President Ronald Reagan had this warning:

By providing material support to terrorist groups which attack U.S. citizens, Libya has engaged in armed aggression against the U.S. under established principles of international law, just as if [Qadhafi] had used its own armed forces. . . . If these [economic and political] steps do not end Qadhafi's terrorism, I promise you that further steps will be taken.

Shortly thereafter, on April 5, 1986, Le Belle discotheque in West Germany, a popular hang-out for the off-duty American servicemen, was bombed, leaving two Americans dead and 154 persons injured. U.S. intelligence indicated Libya sponsored this terrorist attack and was about to order additional attacks against U.S. personnel and facilities throughout Europe. President Reagan responded to this threat by bombing military targets in Tripoli and Benghazi, Libya on April 14, 1986.

In deciding to use military force against Libya, deterrence certainly was a major, if not the primary, consideration. President Reagan

180. Sofaer, supra note 5, at 103.
181. Id.
182. President's News Conference, Pub. Papers 17–18 (Jan. 7, 1986). A few weeks after President Reagan's warning, on January 15, 1986, then U.S. Secretary of State, George P. Shultz repeated the point:

There should be no confusion about the status of nations that sponsor terrorism against Americans and American property. There is substantial legal authority for the view that a state which supports terrorist or subversive attacks against another state, or which supports or encourages terrorist planning and other activities within its own territory, is responsible for such attacks. Such conduct can amount to an ongoing armed aggression against the other state under international law.

183. John Tagliabue, 2 Killed, 155 Hurt in Bomb Explosion at Club in Berlin, N.Y. Times, Apr. 6, 1986, at A1. One serviceman was killed in the blast; another died of wounds shortly after.
187. As Major Phillip A. Seymour notes:
emphasized that the United States would act "with others if possible and alone if necessary to insure that terrorists have no sanctuary anywhere."  

Despite the U.S. claim that the Berlin bombing had actually been ordered by the Libyan government, the U.S. action was widely condemned. The U.N. General Assembly adopted a resolution condemning the United States, and a proposed Security Council resolution condemning the U.S. action failed to pass owing to vetoes by the United States, the United Kingdom, and France.

b. Retaliatory Strikes

When the U.N. Charter was drafted in 1945, the right of self-defense was the only included exception to the prohibition of the use of force, though customary international law had previously accepted reprisal, retaliation, and retribution as legitimate responses as well. Since 1953, the use of force by way of reprisals has been strongly condemned by the United Nations as an illegal use of force under the U.N. Charter.

Although President Reagan cited self-defence under Article 51 of the U.N. Charter as the legal basis for the air strike, his explanation implicitly included retaliation (i.e., reprisal) as an additional justification. In deciding to use military force against Libya, deterrence certainly was a major, if not the primary, consideration. This interpretation is supported by then Vice President George Bush's comments a month prior to the Libyan raid when he stated that American policy in combating terrorism would be one of a willingness to "retaliate."

188. President Ronald Reagan, supra note 187, at 1.
192. Reprisal allows a state to commit an act that is otherwise illegal to counter the illegal act of another state. Retaliation is the infliction upon the delinquent state of the same injury that it has caused the victim. Retribution is a criminal law concept, implying vengeance that is sometimes used loosely in the international law context as a synonym for retaliation. See generally MALCOLM N. SHAW, INTERNATIONAL LAW 777–91 (4th ed. 1997).
193. BOWETT, supra note 110, at 13–14.
Though some in the international community would argue that reprisal action is inherent to maintaining security, most states condemn the practice.194

In the 1980s, frustration with the legal strictures inherent in the concept of self-defense in the face of the ever-increasing threat of terrorism and the inability to root out terrorist groups led the United States down the path that Israel had embarked on many years earlier—a resort to retaliatory strikes against terrorist cells located in sovereign states.

The U.S. stance towards terrorism of “passive, reactive and patient defense response”195 in the early 1970s shifted to a “no compromise” and very proactive approach.196 In National Security Decision Directive 138 (NSDD 138), signed on April 3, 1984, President Reagan signaled that as far as the executive branch was concerned, the debate over whether military force was within or without the range of counter-terrorism measures was over. Defense Department official Noel Koch explained that NSDD 138 “represent[ed] a quantum leap in countering terrorism, from the reactive mode to recognition that proactive steps [were] needed.”197 Henceforth, the United States would use military force in both pre-emptive and retaliatory scenarios with an aim of ensuring swift and effective retribution.

The U.S. policy position that “... retaliation against terrorist attacks is a legitimate response and an expression of self-defense”198 was practically...
expressed by Israel on October 1, 1985. Six F-15 Israel fighter-bombers unleashed a barrage of bombs on the headquarters of the Palestine Liberation Organization in a suburb of Tunis, the capital of Tunisia, responding to alleged terrorist attacks.199 Israel Defense Minister Yitzhak Rabin seemed to be almost echoing U.S. policy when he stated: “We decided the time was right to deliver a blow to the headquarters of those who make the decisions, plan and carry out terrorist activities.”200

The U.N. Security Council was swift to vigorously condemn the act of armed aggression perpetrated by Israel against Tunisian territory in flagrant violation of the Charter of the United Nations, international law, and norms of conduct.201 Though based on state responsibility, the strike against Libya, which followed the German disco bombing, was also justified on the basis of retaliation.202

A sharp distinction has also been drawn between the use of force in self-defense and its use in reprisals.203 Reprisals and retaliatory strikes are illegal under contemporary international law because they are punitive, rather than legitimate actions of self-defense.204 It would be difficult to reconcile acts of reprisal with the overriding dictate in the U.N. Charter that all disputes must be settled by peaceful means. Further, under the U.N. Charter regarding self-defense, there are three main principles that go into examining the jus ad bellum dimensions of a state’s response if it has suffered a terrorist attack.205 These principles,

199. The Israeli attack by six F-15 fighter-bombers apparently left seventy men, women, and children dead and more than one hundred Tunisians and Palestinians wounded. See Cycle of Terrorism Will Continue With Retaliatory Strikes, HOUSTON POST, Jan. 2, 1986 at 2B.
201. Three days after the attack, a single session of the Security Council adopted Resolution 573 (with the only abstention by the United States), which condemned the Israeli attack; demanded that Israel “refrain from perpetrating such acts of aggression or from the threat to do so;” urged member states to “dissuade Israel from resorting to such acts;” and supported Tunisia’s right to reparations. S.C. Res. 573, U.N. SCOR, 40th Sess., U.N. Doc. S/RES/573 (1985) (vote: 14–0–1), reprinted in 24 I.L.M. 1740–41.
203. The legal status of reprisals is stated very succinctly by Professor Ian Brownlie: “The provisions of the Charter relating to the peaceful settlement of disputes and non-resort to the use of force are universally regarded as prohibiting reprisals which involve the use of force.” BROWNLIE, supra note 110, at 281 (internal citation omitted).
204. Id. at 13.
205. In an exchange of diplomatic notes between the governments of the United States and Great Britain, then-U.S. Secretary of State Daniel Webster outlined a framework for self-defense. Military response to a threat was judged permissible so long as the danger posed was “instant, overwhelming, leaving no choice of means and no moment of deliberation.” CHARLES C. HYDE, 1 INTERNATIONAL LAW: CHIEFLY AS INTERPRETED AND
which deal with the timeliness of the response and the requirements of necessity and proportionality, are difficult to reconcile with retaliatory strikes.

**D. Post-Cold War: A New Epoch in Terror and Counter-Terrorism Responses**

With the end of the Cold War, acts generally described as “terrorism" proliferated in frequency and severity. The rise of globalization and decolonization, and the increasing accessibility and availability of weapons and technology, was quickly enabling well-financed and organized terrorist organizations to transform themselves into global outfits with greater reach and lethality.\(^{206}\) As transnational terrorism became more of a threat, “the world community became more tolerant of military actions against states that supported terrorism.”\(^{207}\)

The new mood within the international community was captured in the early 1990s in the reaction of the international community to the 1988 Pan Am bombing over Lockerbie, Scotland. The Security Council characterized as a threat to international peace and security Libyan support for terrorism. In Resolution 748, the Security Council imposed economic sanctions on Libya for its continuing involvement with terrorist activities and for its refusal to extradite two Libyan nationals alleged to have been involved in the bombing of Pan Am Flight 103. The Council affirmed that:

In accordance with Article 2, paragraph 4 of the Charter of the United Nations, every State has a duty to refrain from organizing, instigating, assisting or participating in terrorist acts in another State or acquiescing in organized activities within its territory directed toward the commission of such acts, when such acts involve a threat or use of force.\(^{208}\)

In characterizing Libyan action as a threat to international peace and security, it would seem that the door to possible use of military force had been opened. After all, Article 1(1) states that the purpose of the United Nations is:

[M]aintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to

---

\(^{206}\) In relation to the rise of terrorism, see generally Peter Chalk, *West European Terrorism and Counter-Terrorism: The Evolving Dynamic* 23-44, 65-90 (1996).

\(^{207}\) Travailo & Altenburg, * supra* note 4, at 106.

\(^{208}\) S.C. Res. 748, *supra* note 170, at 52.
bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace. 209

Such purpose makes clear the importance, "in the legal order embodied in the Charter, of maintaining international peace but also the readiness to use force to combat aggression and to prevent threats to the peace from materializing into acts of aggression or breaches of the peace—the Charter is about keeping the peace not about pacifism." 210

The new pugnacious mood was further manifest by the fact that there was little objection to the 1993 cruise missile attacks against Iraq for its role in the foiled assassination attempt on the life of former President George Bush, Sr. 211 Five years later, when the United States bombed terrorist targets in Afghanistan and Sudan in reaction to the bombings of two of its embassies in East Africa, the world reaction to the U.S. attacks against Afghanistan was muted. 212 While the criticism of the bombing of the pharmaceutical factory in Sudan was more intense, the protest was largely confined to the quantity of proof presented by the United States that chemical weapons were processed at the factory. Neither the Security Council nor the General Assembly took any formal action with regard to either attack.

1. September 11: Crossing the Rubicon

On September 11, 2001, in a terrorist attack whose audacity and horrific toll left the world reeling, four commercial aircraft were hijacked and crashed into the symbols of American supremacy—its economic dominance and military might. Two of them were flown into the twin towers of the World Trade Center in New York City, causing both buildings to

212. International reaction to the 1998 U.S. cruise missile strikes against terrorist targets in Afghanistan and Sudan in response to the U.S. embassy bombings in East Africa was mixed, with the most intense criticism focused on the Sudan attack. Western European nations supported the U.S. actions to varying degrees, while the Russian President Boris Yeltsin declared that he was “outraged” by the “indecent” behavior of the United States. China issued an ambiguous statement condemning terrorism and Japan said it “understood America’s resolute attitude towards terrorism.” See Phil Reeves, Outraged Yeltsin Denounces “Indecent” U.S. Behaviour, INDEP. (London), Aug. 2, 1998, at 2.
collapse, a third aircraft crashed into the Pentagon building in Arlington, Virginia, which houses the headquarters of the U.S. Department of Defense and the U.S. armed forces, the fourth aircraft, crashed near Somerset, Pennsylvania.\footnote{Rensselaer Lee & Raphael Perl, Terrorism, the Future, and U.S. Foreign Policy, in MAJOR STUDIES AND ISSUE BRIEFS OF THE CONGRESSIONAL RESEARCH CENTER 1 (Supp. 2002).}

The tragic events of September 11 prompted the international community to examine international terrorism anew. The magnitude of the acts went beyond terrorism as it was known, and statements from various capitals around the world pointed to a need to develop new strategies to confront a new reality. Previously acts of terrorism were seen as criminal acts, carried out by private, non-governmental entities.\footnote{Id. supra note 19, at 407.} In contrast, the September 11 attacks were regarded as an act of war.\footnote{Id.} This effectively marked a turning point in the long-standing premise of international law that force, aggression, and “armed attacks” are instruments of relations between states.\footnote{Id.} Terrorism was no longer merely a serious threat to peace and stability to be combated through domestic and international penal mechanisms—use of force was now an avenue for managing the consequences of terrorist strikes.

\textit{a. State Responsibility Marches to New Frontiers}

In the aftermath of the September 11 attacks, the statements were strident and unequivocal. On the day of the attacks, President George Bush Jr. stated succinctly: “We will make no distinction between the terrorists who committed these acts and those who harbor them.”\footnote{In his address to the nation immediately following the terrorist attacks on September 11th, President Bush stated that America would “make no distinction between the terrorists who committed these acts and those who harbor them.” President George W. Bush, Address to the Nation, reprinted in WASH. POST, Sept. 12, 2001, at A2.} Congress, in its joint resolution of September 14, 2001, authorized the use of force against those who “aided” or “harbored” those who carried out the September 11 attacks, as well as those who committed the attacks.\footnote{After the Attacks: Text of Joint Resolution Allowing Military Attacks, N.Y. TIMES, Sept. 15, 2001, at A16.} On September 16, 2001, Vice President Cheney stated that “if you provide sanctuary to terrorists, you face the full wrath of the United States of America.”\footnote{It’s going to Require Constant Vigilance, WASH. POST, Sept. 17, 2001, at A12.}

In a speech before a joint session of Congress on September 20, 2001, a pugnacious President Bush stated: “From this day forward, any nation that continues to harbor or support terrorism will be regarded by the US
as a hostile regime.” The message was later firmly reiterated in sweeping terms:

America has a message for the nations of the world: If you harbor terrorists, you are terrorists. If you train or arm a terrorist, you are a terrorist. If you feed a terrorist or fund a terrorist, you’re a terrorist, and you will be held accountable by the U.S. and our friends.

The guiding principle reflected by these statements to treat those who harbor terrorists no differently than the terrorists themselves was described by White House spokesman Ari Fleischer as “a dramatic change in American policy.” Yet while the breadth of these statements appeared at odds with the tenor of the international legal regime on the use of force, the world community either said little about this change in policy or endorsed it. This lack of reaction, as well as the wide support that the United States would soon enjoy in its military campaign against Afghanistan, was perceived in certain quarters as “perhaps the strongest manifestation of evolving customary international law regarding the use of force against terrorism.”

i. Operation “Enduring Freedom”

In the immediate aftermath of the September 11 attacks, the United States connected the Taliban regime to Al Qaeda on the grounds that it harbored Osama bin Laden and his organization, refused to deliver bin Laden to requesting states, and that the Taliban increased their responsibility for Al Qaeda’s actions after-the-fact by endorsing the

224. Id.
September 11 attacks. The symbiotic relationship of Al-Qaeda in Afghanistan and the Taliban regime meant that the Taliban shared significant responsibility for Al-Qaeda’s actions in the September 11 attack.

Before the United States even attacked Afghanistan, the U.N. Security Council affirmed that the September 11 attacks gave rise to a right of self-defense. Passed by the Council the day after the attacks, Resolution 1368 condemned the attacks and recognized “the inherent right of individual or collective self-defense in accordance with the Charter.”

Resolution 1373, passed seventeen days later by the Security Council, reaffirmed the right of self-defense in the context of the September 11 attacks and went on to reaffirm “the need to combat by all means, in accordance with the Charter of the United Nations, threats to international peace and security caused by terrorist acts.” Moreover, the Security Council’s subsequent characterization of those acts as “armed attacks” was echoed by other international bodies. Thus, the United States enjoyed strong support from the Security Council before it had to articulate the actual case for its actions in Afghanistan and despite the possibility that existing restrictions on the right of self-defense precluded a lawful exercise of that right under the circumstances.

Professor J. M. Beard notes: “The unprecedented response of the U.N. Security Council and the international community in general to the September 11 terrorist attacks on the United States provides a stark contrast to the reaction to the raid on Libya [in 1986].” He concludes by asserting that a number of factual and legal distinctions between the circumstances surrounding the September 11 attacks and previous terrorist attacks giving rise to the use of force by the United States

227. Id.
demonstrated the propriety of this particular exercise of self-defense under Article 51 and customary international law. These positive sentiments are based on the willingness of states and the U.N. Security Council to invoke and affirm the right of self-defense in response to the September 11 terrorist attacks on the United States, in sharp contrast to previous terrorist attacks. In any case:

Before the September 11 terrorist attacks, the U.N. Security Council had never approved a resolution explicitly invoking and reaffirming the inherent right of individual and collective self-defense in response to a particular terrorist attack.

The Council’s unprecedented willingness to invoke and reaffirm self-defense under Article 51 in response to the September 11 terrorist attacks is an important act and, for some states, helped legitimize the US military response as a legal use of force.

“Operation Enduring Freedom” commenced on October 7, 2001 with a mix of air strikes from land-based bombers, carrier-based jetfighters, and cruise missiles. The initial military objectives of “Operation Enduring Freedom” included the destruction of terrorist training camps and infrastructure within Afghanistan, the capture of Al Qaeda leaders, and the cessation of terrorist activities in Afghanistan. By October 20, 2001, U.S. and Coalition forces had destroyed virtually all Taliban air defenses. By mid-March 2002, the Taliban had been removed from power and the Al Qaeda network in Afghanistan had been destroyed.

“Operation Enduring Freedom” in Afghanistan signaled a renewed determination on the part of the United States to combat international terrorism and states that sponsor it, as well as laid fertile ground for debate on the strategic or legal approach that states should adopt in responding to such threats. This was coupled with a recognition that the modern threat to U.S. power and security rises not from one particular organization, but from the growing threat of international terrorism, particularly terrorism that enjoys active or tacit state support.

233. As articulated by President George W. Bush on Sept. 20, 2001, supra note 220.
234. Operations in Afghanistan involved significant contributions from the international community. By 2002 the coalition had grown to more than sixty-eight nations, with twenty-seven nations having representatives at the U.S. Central Command (CENTCOM) headquarters.
235. The war on terror “will not end until every terrorist group of global reach has been found, stopped and defeated. . . . From this day forward, any nation that continues to harbor or support terrorism will be regarded by the U.S. as a hostile regime.” President George W. Bush, Address to a Joint Session of Congress and the American
Wide support for the U.S. action, as well as the fact that the action was given firm footing by Security Council resolutions, led many to believe that the U.N. Charter regime on the use of force was visibly enrolled in change. Military action in Afghanistan in the aftermath of the September 11 attacks drew favorable responses to the use of force—the U.S. right of self-defense often being mentioned in the same breath as the terrorist attacks.

On September 12, 2002, about six months after routing Al Qaeda fighters and toppling the Taliban from power, President Bush challenged the United Nations to address the threat posed by Iraq as highlighted by its continuing defiance of the Security Council. The war against Iraq was to be the defining moment in the evolution of the “Bush Doctrine,” marking a growing coherence and confidence in the strategy of “offensive defense.”

b. Old Solutions for New Problems: Pre-Emptive Strikes

Customary international law has long recognized that no requirement exists for states to “absorb the first hit.” The doctrine of anticipatory or pre-emptive self-defense, as developed historically, is applicable only when there is a clear and imminent danger of attack. The means used for pre-emptive response must be strictly limited to those required for the elimination of the danger and must be reasonably proportional to that objective.

The U.N. Charter seems to expressly preclude the concept of a pre-emptive strike. Under the Charter, self-defense can only be in response to an armed attack, not a threatened attack. A significant number of scholars argue that the U.N. Charter precludes any right of anticipatory self-defense. This argument relies on a restrictive reading of Article 51 of the U.N. Charter which permits the use of force in the event that “an armed attack occurs.” These writers assert that this language, at least by implication, precludes the use of force in anticipation of an

240. U.N. Charter art. 51.
attack or other event triggering the right of self-defense.  

The basis for the restrictive argument is that, once recognized, a right to anticipatory self-defense is potentially very difficult to define or limit, and bad faith or an error in judgment could easily lead to unnecessary conflict.  It is contended that the right to respond with force in self-defense, even to a triggering act that has already occurred, is temporally limited. As the Caroline incident indicates, the customary right of self-defense appears to require immediate action. Otherwise, there is a strong argument that the use of force is nothing more than a reprisal, which, while permitted under limited circumstances by customary international law, is widely agreed to have been outlawed by the U.N. Charter.

i. Weapons of Mass Destruction: A New Calculus in Preemptive Action

Some scholars believe that a right of truly anticipatory self-defense has emerged outside of Article 51 in light of the availability of weapons of mass destruction. Professor Thomas Franck accounts for the emergence of a viable doctrine of anticipatory self-defense through "the transformation of weaponry to instruments of overwhelming and instant destruction. These [weapons bring] into question the conditionality of Article 51, which limits states' exercise of the right of self-defense to the aftermath of an armed attack. Inevitably, first-strike capabilities begat a doctrine of 'anticipatory self-defense.'" Professor Christopher Greenwood weighs in with the observation that in a nuclear age, it is the potentially devastating consequences of prohibiting self-defense, unless an armed

241. Even if one does not limit the right of self-defense to "armed attacks," the language of Article 51 of the United Nations Charter still reasonably suggests that a triggering event must actually have occurred, not merely be anticipated.

243. Where it is understood as "anticipatory self-defense," the customary right to pre-empt has its modern origins in the Caroline incident, which established that the serious threat of armed attack may justify militarily defensive action. See supra text accompanying note 205.

244. MOORE, supra note 176, at 409–14.

245. Bowett, supra note 110, at 191–92; see also Erickson, supra note 239, at 142–43.

attack has already occurred, that leads one to prefer the interpretation permitting anticipatory self-defense. He argues further:

... this view accords better with State practice and with the realities of modern military conditions than with the more restrictive interpretation of Article 51, which would confine the right of self-defense to cases in which an armed attack had already occurred—although it has to be said that, as a matter of simple construction of the words alone, another conclusion might be reached.\(^\text{248}\)

The positions by Franck and Greenwood are supported by Professor Michael Glennon, who eloquently lays out five factual contemporary realities that the U.N. Charter drafters did not have the benefit of more than half a century ago when drafting the document.\(^\text{249}\)

The arguments by these scholars are particularly strong when one considers that shortly after the birth of the U.N. Charter, the Atomic Energy Commission suggested in its First Report in December 1946 that preparation for atomic warfare in breach of a multilateral treaty or convention would, in view of the appalling power of the weapon, have to be treated as an “armed attack” within Article 51 of the U.N. Charter.\(^\text{250}\)

---

249. Professor Michael Glennon begins by noting that 21st century security needs are different from those imagined at the founding of the United Nations and then sets out the following five factual realities:

1. [T]he intended safeguard against unlawful threats of force—a vigilant and muscular Security Council—never materialized. ...
2. [M]odern methods of intelligence collection, such as satellite imagery and communications intercepts, now make it unnecessary to sit out an actual armed attack to await convincing proof of a state’s hostile intent.
3. [W]ith the advent of weapons of mass destruction and their availability to international terrorists, the first blow can be devastating—far more devastating than the pinprick attacks on which the old rules were premised.
4. [T]errorist organizations “of global reach” were unknown when Article 51 was drafted. [They have however flourished owing to large “war chests” facilitating] develop[ment] and stockpil[ing] of weaponry[, acquisition of state of the art] communications equipment [and safe training] camps... All this requires a sanctuary, which only states can provide—and which only states can take away.
5. [T]he danger of catalytic war erupting from the use of preemptive force has lessened [considerably] with the end of the Cold War ... [thus] mak[ing] less sense today, when safe-haven states and terrorist organizations are not themselves possessed of preemptive capabilities.

More specifically, the AEC made the following recommendations to the Security Council about the control of nuclear energy and nuclear weapons: "The development and use of atomic energy are not essentially matters of domestic concern of the individual nations, but rather have predominantly international implications and repercussions."251

The impact of WMDs on the modern self-defense doctrine appears to be the basis on which some commentators have concluded that a doctrine permitting certain anticipatory self-defense actions is available for states to utilize.252 Truly anticipatory self-defense would permit the use of force "[i]f a state has developed the capability of inflicting substantial harm upon another, indicated explicitly or implicitly its willingness or intent to do so, and to all appearances is waiting only for the opportunity to strike."253

It cannot be supposed that the inviolability of territory is so sacrosanct as to mean that a state may harbor within its territory the most blatant preparation for an assault upon another state's independence with impunity; the inviolability of territory is subject to the use of that territory in a manner which does not involve a threat to the rights of other states.254 Supporting this position further is the argument that there is no requirement under the literal letter of Article 51 that a foreign government itself directly undertake the attack to which a state responds.

ii. Operation "Iraqi Freedom"

Even as the United States moved against Afghanistan, the highest levels of military, legal, and diplomatic policymakers in Washington began debating how the United States should confront states that sponsor terrorism and proliferate WMDs. The immediate focus of that debate centered on U.S. policy towards Iraq. The magnitude of the September 11 attacks had altered the equation dramatically. The possibility of collusion between a rogue, troublesome nation with potential access to WMDs and terrorists was sufficient to send pulses racing in Washington.

Based on the general support and cooperation that the United States

252. ERICKSON, supra note 239, at 149 ("[A]nticipatory self-defense can be a legal justification for the use of armed force").
254. BOWETT, supra note 110, at 141, 191–92.
received in the military campaign against the Taliban regime in Afghanistan, the United States began to capitalize on this goodwill. It argued that it was legally justified in exercising a right of anticipatory self-defense by attacking hostile "rogue" states and states that harbor terrorists. 255 No longer was terrorism merely a sporadic series of pinpricks, but in view of the possibility of WMDs ending up in the hands of terrorists from rogue states, terrorism could inflict catastrophic destruction 256 and thus posed a threat to the security and survival of the United States—such stance is strongly captured in the National Security Strategy document released about five months before the Iraqi invasion. 257 The United States saw the use of military action to remove the threat of chemical, biological, and nuclear proliferation in Iraq as a strategic imperative, arguing rather strongly that the risk of inaction in the face of such a threat is intolerable.

The military action in Iraq following the "Axis of Evil" speech by President Bush provoked strong opposition given its definite overtones of unilateral military action by the United States against countries that support terror. 258 This was in spite of U.S. insistence that the act was a strategic imperative in its strategy of "offensive defense." 259 Unlike Al Qaeda and the Taliban in Afghanistan, however, Iraq did not bear responsibility for a recent terrorist attack against the United States. 260 The absence of such an attack limited the application of any new rule of international law to Iraq.

The decision to attack was done over the loud objections of a skeptical international community that doubted the existence of the WMDs and many international scholars who were worried by the effect of failure by the United States to secure a Security Council mandate. Military action

---

255. No doubt the U.N. Charter is not a suicide pact. In any case, the International Court of Justice considered this proposition in its Advisory Opinion on the Legality of the Threat or Use of Nuclear Weapons, 1996 I.C.J. 226, 296 (July 8), wherein it noted that it would not lose sight of the fundamental right of every state to survival, and thus its right to resort to self-defense, in accordance with Article 51 of the Charter, when survival is at stake.

256. See President's Address to the U.N. General Assembly, supra note 238 ("[I]f an emboldened regime were to supply [weapons of mass destruction] to terrorist allies, then the attacks of September 11th would be a prelude to far greater horrors").

259. Id.

against Iraq, not surprisingly, split the international community and inflamed the world's major powers since it raises debate both as a matter of policy and legality. Considering that the use of armed force can only be justified under international law when used in self-defense, can the United States go beyond the rhetoric and actually carry the "War on Terror" to those rogue nations who are identified as supporters and sponsors of terrorist activities, but have not actually physically engaged in an act of aggression against the U.S.?261

The convergence of international terrorism and weapons of mass destruction presents a grave threat to international peace, security, and prosperity and indeed to the very survival of nations. What is disturbing about the U.S. stance is the fact that anticipatory self-defense is being touted as an appropriate vehicle in the war against international terrorism even though Article 51's "armed attack" requirement supercedes any pre-existing right of anticipatory action.

Overall, the "Bush Doctrine" of preventive self-defense threatens to upset the international regime on the use of force. In any case, whatever legal and political capital that the United States and its military campaign fuelled in the run up to "Operation Enduring Freedom" was effectively squandered away in the rash and ill-advised "Operation Iraqi Freedom."262 If the "Bush Doctrine" forms the basis of new state practice, the existing system would be transformed from its tenuous law-based framework to a balance-of-power system.263 Once the door to pre-emptive strikes is open, it can hardly be closed again; and any nation in the world will be able to take advantage of this option.

V. CONCLUSION

The September 11 terrorist attacks reinforced the proposition that the U.N. Charter system is ill-equipped to deal with contemporary security threats, with its emphasis on a law enforcement paradigm whose success relies ultimately on the cooperation of states. It is a reality that criminal prosecutions are generally ineffective in deterring fundamentalist terrorist groups able to recruit individuals as prepared for sacrifice as good soldiers. A purely law enforcement approach cannot be expected

263. Id. at 34.
to deal with this threat nor shut down terrorist organizations operating in hostile and uncooperative states.

After September 11, states simply may believe, more than before, that they are justified in acting outside the U.N. system.

A collective, institutional response to terrorism may be more effective than ad hoc unilateralism or narrow coalition building. It may be difficult to prevent ad hoc unilateralism from devolving into self-interested opportunism. Who defines what an armed attack is? A "threat to the peace"? Who defines when, where, how, and why the use of force can be initiated to contain (or punish) rogue states? If the US can use extensive military force to respond to terrorism, there is no principled basis to deny others that entitlement.264

Despite the horror of September 11, an unbridled use of military force is too all-encompassing to conform to even an expansive reading of the U.N. Charter. The current climate dictates the need to realign the existing rules on the use of force to match the altered international security environment. Measures from another era that simply impose a limit on the use of force that frustrates a nation's ability to defend itself will result in the United Nations being marginalized as states fall back on the expansive right of self-preservation and inevitably place their own survival above adherence to an international law system that cannot guarantee their security and the safety of their citizens. The restrictive international regime on the use of force will remain relevant only if the international community explores and develops new avenues for dealing with the threat of international terrorism.
