At Risk for Huntington's Disease

HD is a genetically caused brain disorder that causes uncontrollable bodily movements and robs people's ability to walk, talk, eat, and think. The final result is a slow, ugly death. Children of parents with HD have a 50-50 chance of inheriting the disease. There is no cure or treatment.

Join the Facebook Live event (soon!) on Pope Francis's historic audience with Huntington's disease families

I want to invite the Huntington's disease community – and all potential new supporters of the cause – to participate in my Facebook Live interview about [Pope Francis's historic HD audience](#) on Wednesday, May 31, at 11 a.m. Pacific Daylight Time.

Conducted by *San Diego Union-Tribune* reporter Bradley Fikes, the interview will take place at this link: j.mp/sdutface. Participants can send questions and comments.

The interview will discuss details of the papal audience, where [Francis declared](#) that HD should be “hidden no more.” It will also allow for reflection on the significance of the event for the HD movement. ([Click here](#) to watch highlights of the audience).

Building on [#HDdenomore's](#) goal of increasing global awareness of HD and removing the shame associated with the disease, we in the HD community can use the interview to expand our base of supporters.

Please invite others beyond your regular circle of friends, relatives, and acquaintances to watch.

Gene Veritas (aka Kenneth P. Serbin) with Pope Francis, who is holding a picture of Gene's late mother Carol Serbin, a victim of HD, and her long-time caregiver, the late Paul Serbin (photo by L'Osservatore Romano)

I don't always comment, but I always read your blog, Gene, and I want to thank you again and again for all that you do.
